

## Short-stroke cylinders ADVC/AEVC

**FESTO**

## Key features

### At a glance

-  Diameter  
4 ... 100 mm
-  Stroke length  
2.5 ... 25 mm

Short-stroke cylinders are ideal for clamping tasks with short strokes, e.g. in machining jigs.

They offer:

- Rapid response when pressure is applied
- Large clamping forces in comparison to their size
- Minimal installation space
- Integrated sensor slots for contacting or contactless proximity sensors
- Hole pattern for mounting as per VDMA 24562 for  $\varnothing$  32 ... 100 mm

### Connecting two cylinders with identical piston diameters to form a 3- or 4-position cylinder

A 3- or 4-position cylinder consists of two separate cylinders whose piston rods advance in opposing directions. This means that depending on actuation and stroke division, this type of cylinder can assume up to four positions. In each case the cylinder is driven precisely against a stop.

Note that when one end of the piston rod is fixed, the cylinder barrel executes the movement. The line connections to the cylinder must therefore be flexible.

#### To achieve 3 positions

Two cylinders with identical stroke length must be connected together.

#### To achieve 4 positions

Two cylinders with different stroke lengths must be connected together.

1) Corrosion resistance class CRC 1 to Festo standard FN 940070

Low corrosion stress. Dry indoor application or transport and storage protection. Also applies to parts behind coverings, in the non-visible interior area, and parts which are covered in the application (e.g. drive trunnions).

- **Note**

Screws with special lengths are required to fit diameters 80 mm and 100 mm. → page 50
